

# Research publications reveal extent of workplace cancer risks

 [Europe](#)

The ETUI research organisation has published a new report and issue of its health and safety magazine, HesaMag, that both cover the risks of workplace cancers. As many as 100000 deaths a year are linked to workplace carcinogens but it is not just hazardous substances that are of concern. The ETUI publications also cover other risks such as night work which has been linked to higher risk of breast cancer with some specific cases affecting hospital staff. HesaMag also looks at the problems of getting proper recognition of the risks faced by workers in sectors like cleaning, maintenance and waste-recycling.
