

# Critical issues in energy negotiations

## Ukraine

Earlier this month the Atomprofilska nuclear energy union began negotiations with the Energoatom company. However, the industry is facing major challenges and the union is particularly concerned about the financial state of the company and the lack of support from the government. The union argues that the government has left the company effectively on the verge of bankruptcy and this is having an impact on maintaining proper health and safety. The union is looking to appeal directly to the President to take action, will organise protests in key cities, is calling for the resignation of the acting energy minister and may also appeal to the International Atomic Energy Authority.
