

## ESTONIA

Report from ROTAL 23.3.20

Currently only 15 patients in hospital but every day cases are increasing by 20-30 people but likely to increase further with extension of testing.

Main problem is lack of protective equipment, which has been made worse as at the beginning of the crisis, Estonia sent a lot of equipment to China and Asian tourists bought a lot of protective equipment from us.

The Estonian Government is waiting for supplies from Asia with first expected on 27th.

Social care workers are not happy, because they need more protective equipment.

For workers affected by economic shutdown, the government has promised to cover March and April wages: 70% from unemployment office and 30% from employer, but not more than 1000 eur per month.
