UN RIESGO SILENCIOSO: EL CÁNCER EN BOMBERAS/OS

Usa el equipo de respiración durante toda la intervención. La no presencia de CO, no indica que no haya otras sustancias tóxicas y cancerígenas.

¡Ojo!: Mascarillas filtrantes para gases también deben ser usadas en fuegos exteriores.

Debemos estar el menor tiempo posible en contacto con los contaminantes. Quitate el uniforme tras la intervención y ponte ropa limpia.

Si consideras que está contaminado manda a lavar uniforme, verdugo, máscara y casco.

La cabina del camión debe ser un espacio limpio de contaminantes. Acude a las intervenciones con uniformes y equipo de trabajo descontaminados.

Dúchate al llegar al parque tras cualquier incendio. La ropa que te quites no la laves con el resto de la colada, si es posible lávala en el parque.

Utiliza siempre guantes y mascarilla para manipular el material contaminado (uniforme, casco, mangueras, ERAs...).

RECUERDA: Evita la exposición durante las revisiones diarias a los gases de los motores diésel. Son cancerígenos.

European directives on safety and health at work

A directive is a legal act provided for in the EU Treaty. It is binding in its entirety and obliges Member States to transpose it into national law within a set deadline.

European directives on safety and health at work

A directive is a legal act provided for in the EU Treaty. It is binding in its entirety and obliges Member States to transpose it into national law within a set deadline.

Article 153 of the Treaty on the Functioning of the European Union gives the EU the authority to adopt directives in the field of safety and health at work.

The OSH Framework Directive

- Latest update: 13/12/2021

The European Framework Directive on Safety and Health at Work (Directive 89/391 EEC) adopted in 1989 was a substantial milestone in improving safety and health at work.
