

## COMUNICADO A LOS AFILIADOS

8 de marzo, Día Internacional de la Mujer: ¡Ya es hora de poner fin a los recortes en el sector público que afectan sobre todo a las mujeres trabajadoras!

En el Día Internacional de la Mujer, la Federación Sindical Europea de Servicios Públicos (FSESP) hace un llamamiento para acabar con los recortes en el sector público que perjudican en mayor medida a las mujeres trabajadoras. «La austeridad repercute más en los salarios y el empleo de las mujeres que en los de los hombres», afirma el Secretario General de la FSESP, Jan Willem Goudriaan: «Debemos poner fin a esta crisis silenciosa».

Las mujeres que trabajan en los servicios públicos todavía sufren las consecuencias de la crisis financiera y económica. Eso destaca el tercer informe de la FSESP, que analiza cómo las respuestas de los Gobiernos a la crisis financiera perjudicaron a las mujeres que trabajaban en el sector público en el período 2008-2014. Examina las repercusiones en el empleo y el sueldo de las mujeres y la manera en que los recortes han afectado a las estructuras de igualdad en ocho países: España, Grecia, Irlanda, Letonia, Portugal, Reino Unido, República Checa y Rumanía.

Entre 2008 y 2014, solo en Grecia el número de mujeres empleadas en los sectores clave de la administración pública, la educación y la salud se redujo en 76 900, un 16,1%, mientras que el de hombres descendió un 15,5%. Los puestos de trabajo en la administración pública durante el mismo período resultaron particularmente afectados, ya que el empleo femenino disminuyó más del doble (-31%) que el masculino.

En el Reino Unido, entre los años 2010 y 2014 se registró un descenso del 5,8% en el empleo femenino (5,5% en el masculino) en la administración pública y un 0,6% en la educación (+8,6% en el masculino), mientras que en el sector de la salud el empleo femenino aumentó un 7,1% (el masculino un 3,0%). Entre 2011 y 2015, el salario de las mujeres en el sector público creció menos que el de los hombres. Durante este período, los ingresos de los hombres aumentaron un 7,0% frente a un 5,4% en el caso de las mujeres.

En Rumanía, el número de mujeres empleadas en el sector público disminuyó de manera abrupta en casi una quinta parte desde 2008, al pasar de 849 590 a 691 100. El empleo masculino resultó aún más afectado, como reflejo de un descenso generalizado de la contratación en el sector público. Los sueldos de las mujeres en Rumanía aumentaron menos que los de los hombres, un 13,5% frente a un 15,0%. En general, la posición de los ocho países examinados es más variada que en los dos informes anteriores de la FSESP, aunque la falta de información sobre numerosos aspectos del empleo y los salarios femeninos en el sector público sigue siendo una preocupación importante. En Grecia y el Reino Unido en particular, la presión sobre el empleo y el sueldo de las mujeres en el sector público sigue siendo intensa. Incluso en los países donde la situación de la mujer en el sector público está empezando a mejorar otra vez, es probable que sea difícil recuperar todo lo perdido. La brecha salarial de género, en lugar de disminuir, se está ampliando en casi todos los países.

Todos los sindicalistas de Europa celebran el Día Internacional de la Mujer, un hito destinado a poner de relieve la lucha para acabar con las desigualdades de género y la segregación por sexos mediante la promoción de la diversidad y la igualdad de retribución por un trabajo de igual valor en el mismo lugar.

## **Czech Republic**

**Government action:** government responses to the financial crisis fall into two clearly distinct periods, divided by the collapse of the right-wing government led by Petr Nečas in June 2013. The first period is one of cuts in pay and jobs and the prospect of ongoing pay freezes. The second period sees the public sector wage bill again expanding.

**Women's employment in the public sector:** there are no figures for women's employment the public sector as a whole, only for the key industries of public administration, education and health. These show that that women's employment has grown slightly more rapidly than men's over the period from 2010 to 2014 – an increase of 4.6% for women and 1.5% for men.

**Women's pay in the public sector:** there are also only industry-based figures for pay. Between 2011 and 2014 (2010 figure are compiled on a different basis) women's pay rose by more than men's in public administration and education but by less than men's in health.

**Impact on equality structures:** after the position worsening in the early years of the crisis, the change of government in 2012 produced a new approach with an increase in staff and greater political commitment.

## **Greece**

**Government action:** for more than six years, Greece has been cutting pay and jobs in the public sector. The election of the radical left SYRIZA government in January 2015 appeared to mark a fundamental change in direction, but the terms of the most recent agreement signed with the European Commission in August 2015, suggest that key parts of the policy, at least will continue.

**Women's employment in the public sector:** there are no figures for women's employment the public sector as a whole, only for the key industries of public administration, education and health. However, these show that between 2008 and 2014 the number of women employed fell by 76,900 a 16.1% drop. This is a sharper fall than for men's employment – down 15.5% – over the same period. Jobs in public administration were particularly hard hit, with a 31% loss of women's employment, twice the level for men – 15.4%.

**Women's pay in the public sector:** there are no figures for women's earnings, neither for the public sector nor by industry.

**Impact on equality structures:** at the start of the crisis there were significant cuts in the budget of the main equality body. However, following the election of the SYRIZA-led government in January 2015 there are plans for new action and legislation.

## **Ireland**

**Government action:** government action in the public sector began in 2008, with effective cuts in take-home pay starting in 2009, and actual cuts in wages a year later. A new

government, elected in 2011, made changes in some measures through not in its approach to the public sector. This change had to wait until 2015, when Ireland had ceased to need financial support from the IMF and EU institutions (Ireland exited the bail-out programme in December 2013) and the economy was again growing strongly.

**Women's employment in the public sector:** there are no figures for women's employment the public sector as a whole, only for the key industries of public administration, education and health. In all three industries women have done less well in terms of employment than men in the period 2008 to 2015, with women's employment falling by more in public administration (down 7.8% compared with men's 3.7%) and rising by less in education and health. In health there were 26.9% more men employed in 2015 than in 2008, but only 11.5% more women. In education, male employment increased by 7.2% over the period, women's by only 4.2%.

**Women's pay in the public sector:** there are no current figures for women's earnings, neither for the public sector nor by industry.

**Impact on equality structures:** the early years following the crisis saw sharp cuts to funding, with the National Women's Council of Ireland (NWCI) reporting a 45% drop by 2015. However, for 2016 there are plans for some recovery in spending.

## Latvia

**Government action:** action in Latvia to cut pay and jobs in public services began in 2008, much earlier than in most other EU states, and the government continued to hold down the public sector wage bill until 2012. In the more recent period, public sector pay has recovered, although it still lags behind pay in the private sector.

**Women's employment in the public sector:** there are no figures for women's employment the public sector as a whole, only for the key industries of public administration, education and health. Women have proportionately lost fewer jobs than men in public administration, but more than men in education, while women's employment in health has risen by less than men's in percentage terms. Taking the three areas together women's employment has fallen by 9,900 (6.3%) over six years, but men's has fallen by more – down 13,500 (21.4%).

**Women's pay in the public sector:** women's pay in the public sector grew slightly less rapidly than men's between 2008 and 2015 (9.2% for women and 9.7% for men). Public sector pay increases have also lagged substantially behind those in the private sector over the same period.

**Impact on equality structures:** a number of programmes to tackle inequality were suspended as part of the governments' early austerity measures and lack of resources continues to be an "important obstacle" to further progress.

## Portugal

**Government action:** the period from 2010 to late 2015, saw ongoing efforts by the government to cut the pay of public sector employees and reduce the numbers employed. However, the pay cuts introduced by the centre-right government, led by Pedro Passos Coelho, were repeatedly ruled unlawful by the Constitutional Court,

forcing it to adopt new measures to achieve its aim of cutting the government deficit. At the end of the period, decisions by the Constitutional Court, led to some restoration of the pay cuts, and the election of a new government in November 2015 offers the prospect of a more fundamental change in direction.

**Women's employment in the public sector:** the number of women employed in the public sector fell by 44,586 (10.4%) over the period December 2011 (the earliest date for which figures are available) to September 2015. This is slightly less than the 11.2% decline in men's employment over the same period.

**Women's pay in the public sector:** there are no figures for women's pay for the whole of the public sector. However, figures for the period October 2011 to July 2015 show that, for the vast majority of occupations where women are in a majority, earnings fell.

**Impact on equality structures:** Comissão para a Igualdade no Trabalho e no Emprego (CITE), the body responsible for promoting equality at work continues to be active, but its budget and staffing have been reduced since 2010.

## Romania

**Government action:** this falls into two distinct periods. Between 2009 and the middle of 2012 public sector pay was subject to a series of cuts, which culminated in a drastic temporary 25% reduction in the second half of 2010, much of which was still in place in 2012. However, in May 2012 the government, which had for much of the period been led by Emil Boc, of the centre-right PD-L party fell, to be replaced by a social democratic government under a new prime minister, Victor Ponta. Under this government pressure on public sector pay eased substantially. However, public sector employment continued to fall.

**Women's employment in the public sector:** the number of women employed in the public sector has fallen sharply since 2008, dropping by almost a fifth (18.7%) from 849,590 to 691,100. Men's employment has fallen by even more (24.4%), reflecting falls in employment in publicly owned industries. In the public sector industries of public administration, education and health, women's employment fell by 18.4% and men's by 18.0%.

**Women's pay in the public sector:** between 2008 and 2014, women's earnings in the public sector increased by less than men's – by 13.5% compared with men's 15.0%.

**Impact on equality structures:** early government actions reduced the influence and effectiveness of equality bodies. However, since 2014, this has been slightly reversed.

## Spain

**Government action:** for most of the period since 2010, Spain's public sector employees have faced continuous downward pressure on their living standards and cuts in employment. It was only at the end of the period in 2015 that any of the pay cuts were reversed, while the reductions in public sector employment also continued until 2014. However, the elections in December 2015 with the likelihood of a new government coalition offer the possibility of a more fundamental change.

**Women's employment in the public sector: women have lost more jobs, both absolutely and proportionately than their male counterparts over the period of austerity, although the percentage difference is small. Between the fourth quarter of 2010 and the fourth quarter of 2015, women's employment in the public sector fell by 139,400 or 7.8%. In the same period men's employment fell by 110,200 or 7.5%.**

**Women's pay in the public sector: there are no figures on women's pay in the public sector, only for pay broken down by industry, up to 2013. These show women being hit harder than men in key parts of the public sector. In public administration, women's pay fell by 2.4%, while men's fell by just 0.2%; in health, women's earnings fell by 6.1% and men's by 4.1%; and in education earnings for women's increased by just 0.5%, while men's went up by 1.9%.**

**Impact on equality structures: in October 2010, the government abolished a separate Ministry for Equality, transferring its responsibilities elsewhere. In 2015, the United Nations' Committee on the Elimination of Discrimination against Women expressed its concern that this restructuring might affect the "development and effective implementation of gender policies". State spending on equal opportunities has also been cut by a third between 2011 and 2015.**

## **United Kingdom**

**Government action: government policy towards employees in the public sector over the last six years has been one of relentless austerity, which is set to continue into the future. Public sector pay was frozen for two years – three years in local government – and has been limited to rises of just one percent since then. Public sector employment has fallen by almost one million since 2010 and by 600,000 if the shift of parts of the public sector into private ownership is discounted. Both trends are expected to continue. The 1% pay cap will last until at least 2019 and public sector employment is forecast to drop by another 100,000 by 2020.**

**Women's employment in the public sector: there are no regular figures broken down by sex for employment in the whole of the public sector. Figures for central government show employment falling by around a sixth both men (17.6%) and women (15.9%). However, the loss of full-time jobs in central government has been worse for women – down 22.4% – than for men – down 20.8%. Figures on an industry basis over the period 2010 to 2014 show a 5.8% decline in women's employment in public administration and a 0.6% fall in women's employment in education. In health, women's employment has increased by 7.1%. The comparable figures for men are a 5.5% fall in public administration, growth of 8.6% in education and an increase of 3.0% in health.**

**Women's pay in the public sector: women's pay in the public sector has grown by less than men's in the period 2011 to 2015 (earlier years are not comparable). Over this period, men's earnings grew by 7.0% compared with 5.4% for women.**

**Impact on equality structures: a combination of austerity and a change of government in 2010 led to dramatic cuts to the gender equality structure in the UK, and spending has been further reduced subsequently. The result has been large-scale cuts in the staffing and funding of the Equality and Human Rights Commission (EHRC), the main body supporting equality in the UK. Over five years, its staffing has been more than halved and its spending has been cut by two-thirds.**
